

Smart House

Ankhubayar Jansan

Mitchell Klein

Ryan Talley

Iterfall

Pro: Allows for flexibility and parallel development of different project pieces.
Con: Did not have the time for complete iterations for all of the project pieces.

Pair Programming

Pro: Easy to catch mistakes and allows for brainstorming while coding.

Con: Easy to get distracted.

Project Tracker

Pro: Simple to use and easy to set up.

Con: Lacks a lot of advanced features that are standard in other tools.

VCS

Pro: Easy to use and manage and has a nice set of statistics tracking.

Con: Did not display any of Mitchell's commits for some reason.

Database

Pro: Ease of use when writing to and from database with little issues

Con: With our knowledge privacy could be a concern

Arduino IDE

Pro: Simple to use and allows for very fast prototyping.

Con: The compiler error messages are usually misleading or not relevant.

Deployment

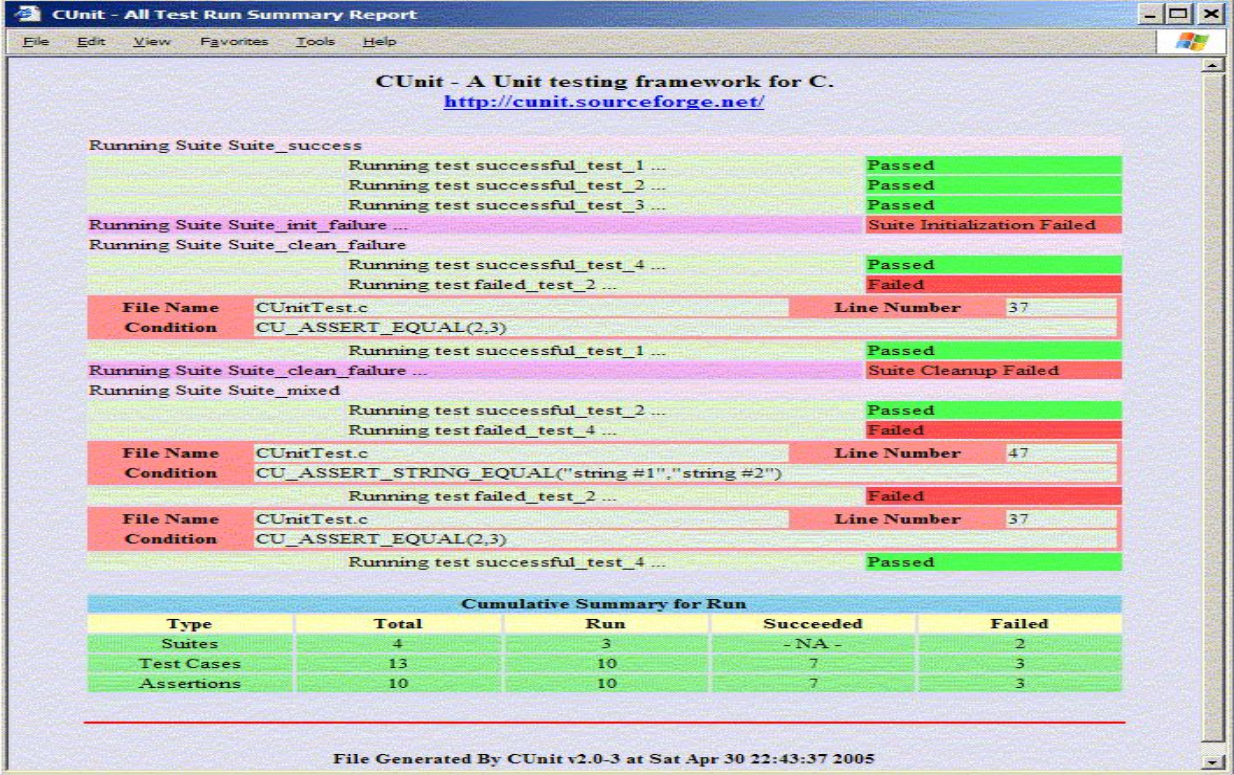

Raspberry Pi

Pro: Very well documented linux mini-computer.

Con: The headless interface, very slow when running SQL with an application.

Unit Testing

Pro: Straightforward and easy to use.

Con: Setting up and initial learning curve is a little steep.

Auto-Documenter

Pro: Mutiple uses and lots of formatting options.
Con: Confussing to work with.

Challenges

Resistor (**R**)

Challenge: Pulse Width Modulation / ADC on the Raspberry Pi.

Solution: Use an Arduino as a peripheral interface.

Challenge: Setting up Bluetooth communication on the Raspberry Pi

Solution: Communicate with program over the command line.

Challenge: A MySQL C API library was powerful, but complex to use.

Solution: Switched to a less powerful, but simpler to use library.
